Ideate Your Own Flagship Event

NEC ID: NEC2659807

College Name: MET Institute of Technology (Polytechnic/B.Tech), Bhujbal Knowledge City, Nashik

Team Name: E-Cell MET

Task: Ideate Your Own Flagship Event

Faculty Advisor: Dr. Umesh Pathak – TPO (MET B.Tech)

Sub Faculty Advisor: Prof. Nayan Sanap (MET B.Tech)

President: Shubham Jadhav - Student

Event Brochure: CodeVibe Brochure

Event Overview

CODEVIBE is a one-day AI startup and product showcase designed to encourage students, aspiring entrepreneurs, and early-stage founders to transform their ideas into working digital products using artificial intelligence and AI-assisted development tools.

Inspired by emerging AI-powered product-building events, CODEVIBE will provide participants with an opportunity to develop a prototype or minimum viable product (MVP), demonstrate its functionality, receive expert feedback, and explore potential opportunities for further development.

The event will focus on practical outcomes rather than ideas alone. Participants will be encouraged to identify real-world problems and create innovative, technology-driven solutions.

Proposed Event Activities

1. Registration and Screening
Participants register individually or in teams and submit their product ideas, problem statements, and proposed solutions. Teams may be screened based on the event's eligibility criteria.

2. Build Your Prototype/MVP
Participants develop their products using AI-assisted development tools, such as Cursor, GitHub Copilot, Claude, or other suitable platforms.

3. Product Showcase
Teams demonstrate their working products and explain the problems they solve, their target users, and their key features.

4. Expert Evaluation
A jury comprising suitable industry professionals, entrepreneurs, and technical experts evaluates the projects.

5. Investor Pitch Opportunity
Selected teams may receive an opportunity to present their products to potential investors or other relevant industry representatives, subject to their confirmed availability.

6. Awards and Recognition
Outstanding teams may receive certificates, prizes, recognition, or opportunities for further mentorship, depending on the event's confirmed arrangements.

Event Details

Event Name: CODEVIBE

Event Type: AI Startup & Product Showcase

Organiser: E-Cell, MET Institute of Technology

Duration: One day

Proposed Participation: The event will involve teams consisting of 2–4 members.

Target Audience: Students, aspiring founders, and early-stage innovators interested in artificial intelligence, software development, and product innovation.

Venue: MET Institute of Technology, as stated in the event brochure.

Timing: 9:00 AM to 6:00 PM

Event Theme and Tagline:

Event theme: AI-Powered Vibe Coding and Rapid Innovation
Tagline: "Imagine It. Build It. Vibe It."

Concept:

CODEVIBE is designed to introduce students to a new approach to software development in which AI tools assist with brainstorming, writing code, debugging, and building prototypes. Instead of focusing only on theoretical knowledge, students will apply their skills to create practical solutions.

Rationale for selecting this theme:

- AI-assisted development is becoming an important part of modern software creation.
- Students get an opportunity to apply classroom knowledge to real problems.
- The event encourages creativity, teamwork, critical thinking, and entrepreneurship.
- Participants can experience the process of turning an idea into a working prototype.
- The competition promotes responsible and meaningful use of AI tools.

Objectives:

1. Encourage innovation and entrepreneurial thinking among students.
2. Develop practical coding and problem-solving skills.
3. Introduce students to AI-assisted development tools.
4. Promote teamwork and effective project presentation.
5. Identify promising student projects that could be developed further.

Guest and Speaker Outreach Plan:

The event may invite software developers, startup founders, AI professionals, faculty members, and experienced project mentors to participate as speakers, judges, or mentors.

Outreach process

Step 1: Identify suitable guests
Shortlist professionals from software companies, AI startups, alumni networks, and local technology communities.

Step 2: Send invitations
Share a formal invitation containing the event concept, proposed date, venue, role, expected time commitment, and audience details.

Step 3: Follow up
Contact invitees after approximately 3–5 days if no response is received. Record their availability and requirements.

Step 4: Confirm and coordinate
Confirm the guest's participation, session duration, equipment needs, arrival time, and any travel arrangements.

Follow-up strategy

- Send a polite reminder after 3–5 days.
- Follow up by phone or professional messaging where appropriate.
- Maintain a record of invitations, responses, confirmations, and pending requests.
- Identify backup judges or mentors in case of cancellations.

Event Budget:

The following is a preliminary budget estimate for an event of up to 120 participants. It assumes the college provides the venue, basic furniture, projector, and some technical facilities at no additional cost.

Expense item	Estimated amount
Certificates and printing	₹1,500
Posters and promotional material	₹800
Refreshments and drinking water	₹3,000

Prizes and recognition	₹3,000
Guest hospitality	₹1,500
Stationery and miscellaneous expenses	₹700
Contingency reserve	₹1,000
Total estimated budget	**₹11,500**

Proposed funding sources

Funding source	Proposed amount
E-Cell + college support	₹6,500
Local business sponsorship	₹5,000
Total proposed funding	**₹11,000**

Funding strategy

1. Submit the proposed budget to the faculty advisor for approval.
2. Approach local IT companies, startups, and businesses for sponsorship.
3. Request in-kind support such as refreshments, printing, certificates, or prizes.
4. Keep records of approved expenses, bills, and sponsor contributions.
5. Obtain approval before making any expenditure.

Posters and Creatives:

Publicity Strategy:

Target audience: MET students interested in coding, AI, software development, entrepreneurship, and innovation.

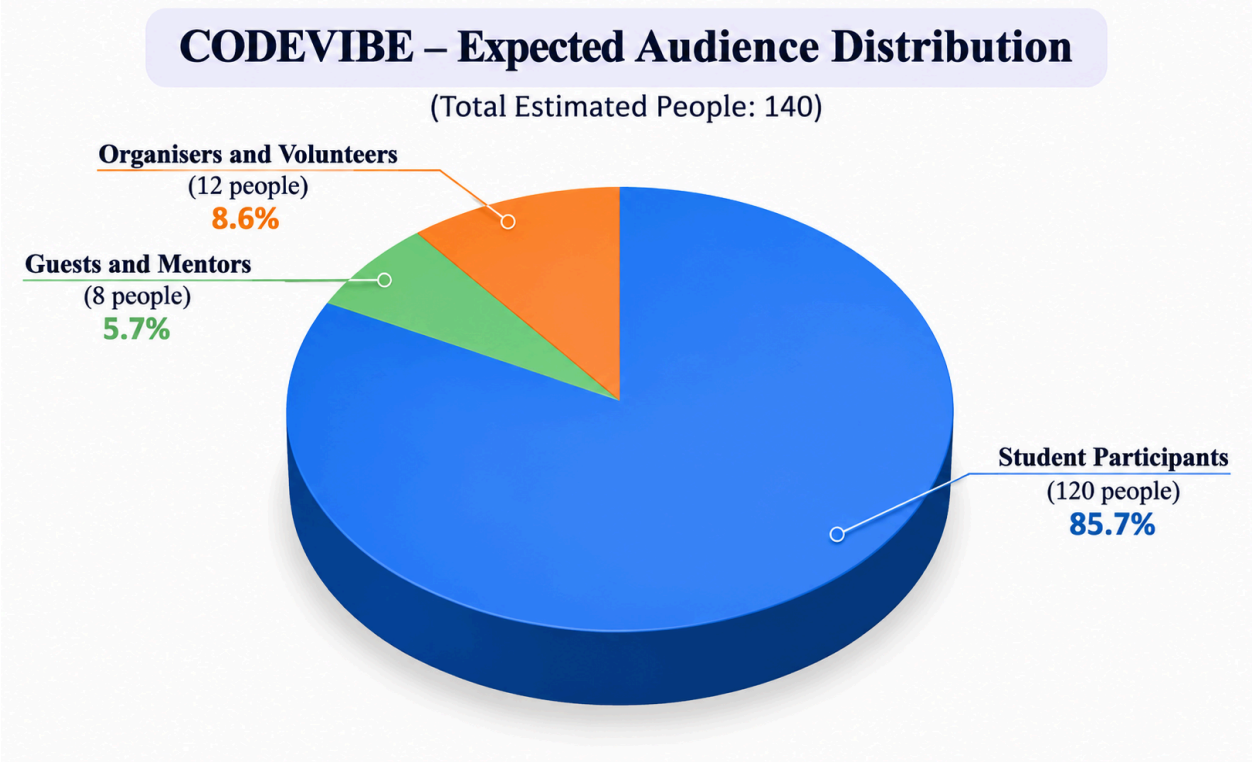

Channel	Publicity activity
WhatsApp	Share the brochure, poster, registration link, and reminders in authorised student groups.

Instagram	Publish announcement posts, stories, countdowns, and event updates.
Classroom announcements	Brief students about the event and encourage team formation.
Faculty network	Ask faculty members to circulate the announcement to eligible students.
E-Cell network	Reach students already interested in innovation and entrepreneurship.
College noticeboards	Display approved posters with a QR code for registration.
Peer ambassadors	Ask student volunteers to promote the event within their departments.

Proposed publicity timeline

- 3–4 weeks before: Announce the event and publish the main poster.
- 2–3 weeks before: Share the brochure, eligibility criteria, and registration link.
- 1 week before: Publish rules, themes, judging criteria, and preparation tips.
- 2–3 days before: Send reminders and confirm registrations.
- Event day: Share approved photographs, updates, and project highlights.
- After the event: Publish results, thank-you posts, and project highlights with participants' consent.

The publicity team should monitor registrations and enquiries regularly, clarify doubts, and avoid advertising unconfirmed dates, guests, or prizes.

Method of estimation

1. Review interest through a preliminary student survey or registration interest form.
2. Estimate the number of eligible students who are likely to participate.
3. Collect registrations and team-member details.
4. Monitor registrations against the proposed capacity of 30 teams.
5. Send confirmation messages to estimate actual attendance.
6. Keep a waiting list if the number of registrations exceeds capacity.

Attendance conversion example

If 150 students express interest and 120 register, the registration conversion rate is:

$$(120/150) * 100 = 80\%$$

If 108 of the 120 registered participants attend, the attendance rate is:

$$(108/120) * 100 = 90\%$$

Venue Plan:

Proposed venue

A computer laboratory or seminar hall at MET Bhujbal Knowledge City, Nashik, depending on the availability of suitable facilities.

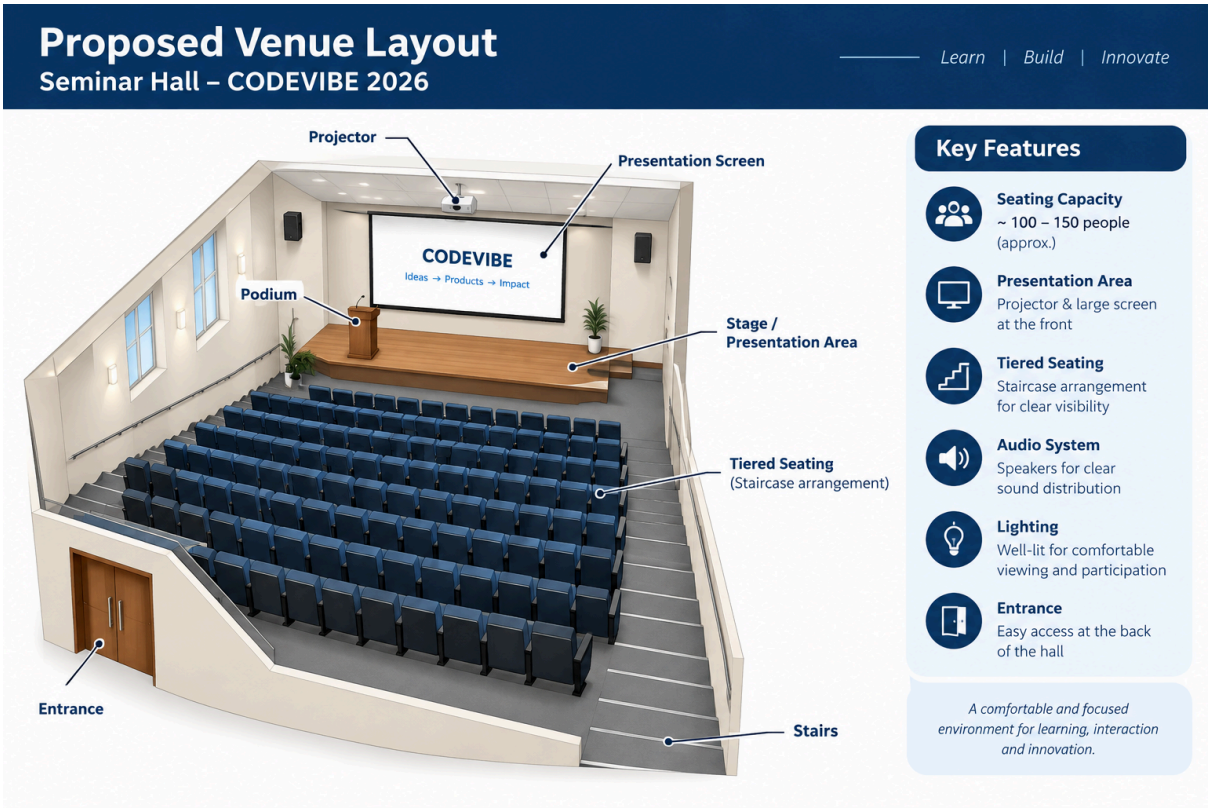

Venue requirements

- Seating capacity for approximately 135–145 people, if the full proposed audience attends.
- Adequate tables and power outlets for participating teams.
- Reliable Wi-Fi and internet access.
- Projector, screen, microphone, and speakers for presentations.
- Suitable lighting, ventilation, and drinking-water facilities.
- Access to washrooms and basic first-aid facilities.
- Space for registration, refreshments, and jury discussions.

Venue booking process

1. Discuss the proposed event date and requirements with the faculty advisor.
2. Inspect the available computer lab or seminar hall and check its capacity.
3. Submit a venue request to the appropriate college authority.
4. Confirm availability, access timings, furniture, internet, and equipment.
5. Obtain written approval and communicate the confirmed venue to participants.
6. Test the internet, projector, power supply, and presentation setup before the event.

Proposed venue layout

Risk and Contingency Plan:

Risk planning helps the organisers respond quickly to unexpected problems and minimise disruption.

Potential risk	Preventive measure	Contingency plan
Internet failure	Test Wi-Fi and bandwidth in advance.	Arrange a backup hotspot or alternative network.
Power outage	Check electrical facilities before the event.	Use available backup power and pause the sprint if necessary.
Speaker or judge cancellation	Confirm attendance in advance.	Contact a backup judge or faculty evaluator.
Low registrations	Begin promotion early and use student ambassadors.	Extend registration, subject to approval, or revise the event scale.

Excessive registrations	Set a registration cap and monitor entries.	Maintain a waiting list or add capacity only with approval.
Software or AI tool issues	Ask teams to test accounts and tools beforehand.	Allow alternative approved tools and provide troubleshooting support.
Project submission failure	Announce submission rules and deadlines clearly.	Provide a backup submission method, such as a designated drive or email.
Schedule delays	Assign a timekeeper and publish a schedule.	Shorten non-essential transitions while preserving fair judging time.
Budget shortfall	Obtain approvals and seek sponsorship early.	Reduce optional costs and prioritise essential facilities.
Participant health or safety issue	Keep first-aid arrangements and emergency contacts available.	Contact the designated college authority and emergency services if needed.

Risk management responsibilities

- Event coordinator: Overall decisions and escalation.
- Technical team: Internet, power, devices, and submission support.
- Publicity and registration team: Attendance records and participant communication.
- Faculty advisor: Approval, safety coordination, and major contingency decisions.

A brief pre-event checklist and team briefing should be completed before participants arrive.

Post-Event Evaluation:

After CODEVIBE, the organising team should evaluate whether the event met its objectives, encouraged participation, and produced useful student projects.

Key performance indicators

Metric	Proposed methods
Team registrations	Target up to 30 teams
Student attendance	Compare actual attendance with confirmed registrations
Project completion	Count teams that submit a working prototype
Event schedule	Record whether activities finish on time
Participant satisfaction	Collect feedback through a digital form
Learning and confidence	Ask participants whether the event improved their practical skills and confidence
Engagement	Track participation in demos, Q&A, and mentoring
Budget performance	Compare actual expenditure with the approved budget
Guest feedback	Ask judges and mentors for suggestions
Future interest	Measure how many participants want to join future E-Cell activities

Feedback form questions

1. How would you rate the overall event? (1–5)
2. Were the instructions and problem themes clear?
3. Did the event help you learn or use AI-assisted coding tools?
4. How would you rate the technical support and organisation?
5. Was the time provided for building your project sufficient?
6. What was the most useful part of the event?
7. What improvements would you suggest?
8. Would you participate in another E-Cell event?

Post-event evaluation process

1. Collect attendance records, completed submissions, and feedback forms.
2. Compare the actual outcomes with the original targets.
3. Review feedback from participants, judges, mentors, and volunteers.
4. Prepare a final report covering achievements, expenditure, challenges, and lessons learned.
5. Share results with the faculty advisor and E-Cell team and identify improvements for future events.
